

- 1.Create a new project**
- 2.Creating a simple view**
- 3.Combine Views Using Stacks**
- 4.State management in swiftUI**
- 5.Reusable HTTP Request**

1.Create a new project

Install XCode and open the application.Click create a new Xcode project

Choose ios and Single View App template

Enter project name and choose SwiftUI as user Interface. Click Next.

Choose options for your new project:

Product Name: MyFirstApp

Team: Add account...

Organization Name: comorins

Organization Identifier: comorins

Bundle Identifier: comorins.MyFirstApp

Language: Swift

User Interface: SwiftUI Your primary implementation language.

☐ Use Core Data

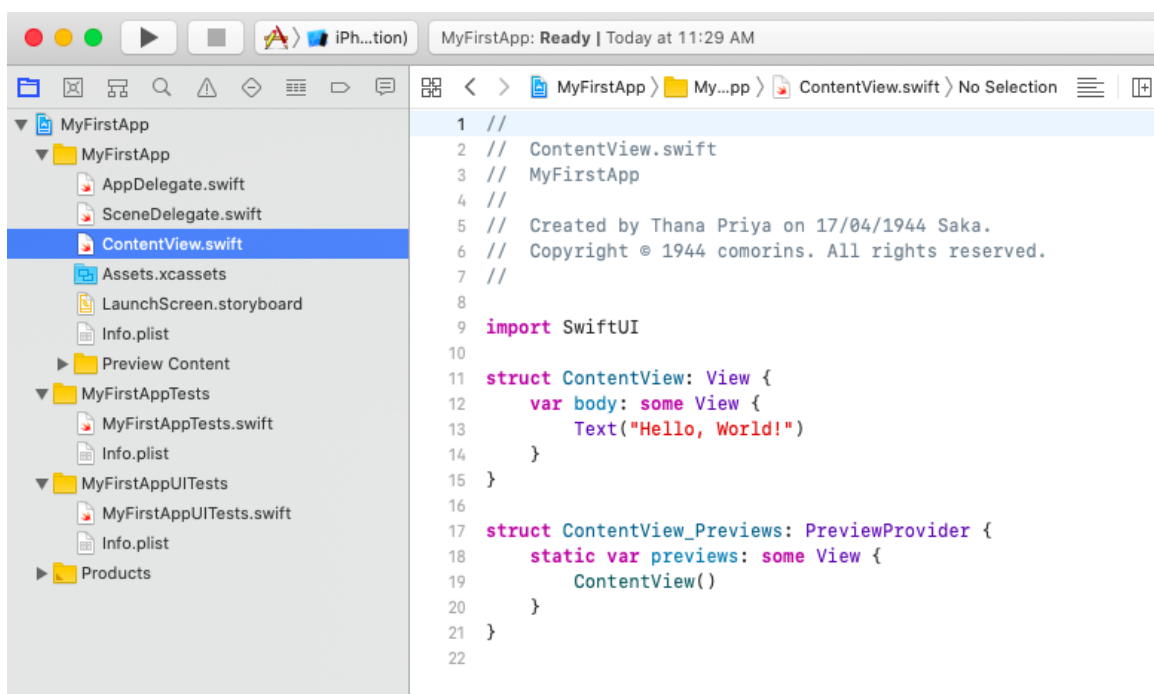

☐ Use CloudKit

☒ Include Unit Tests

☒ Include UI Tests

Cancel Previous Next

Choose a location to save your project. Then your Xcode opens the project.

2.Creating a simple view

- In the Project navigator, select `ContentView.swift`.
- By default, SwiftUI files declare two structures. The first structure describes the view's content and layout. The second structure declares a preview for that view.
- In the canvas click Resume to play the preview. If the canvas isn't available select Editor > Canvas to show it.
- Inside the body property, change "Hello World!" to "Hello SwiftUI!".The preview updates to reflect your changes.

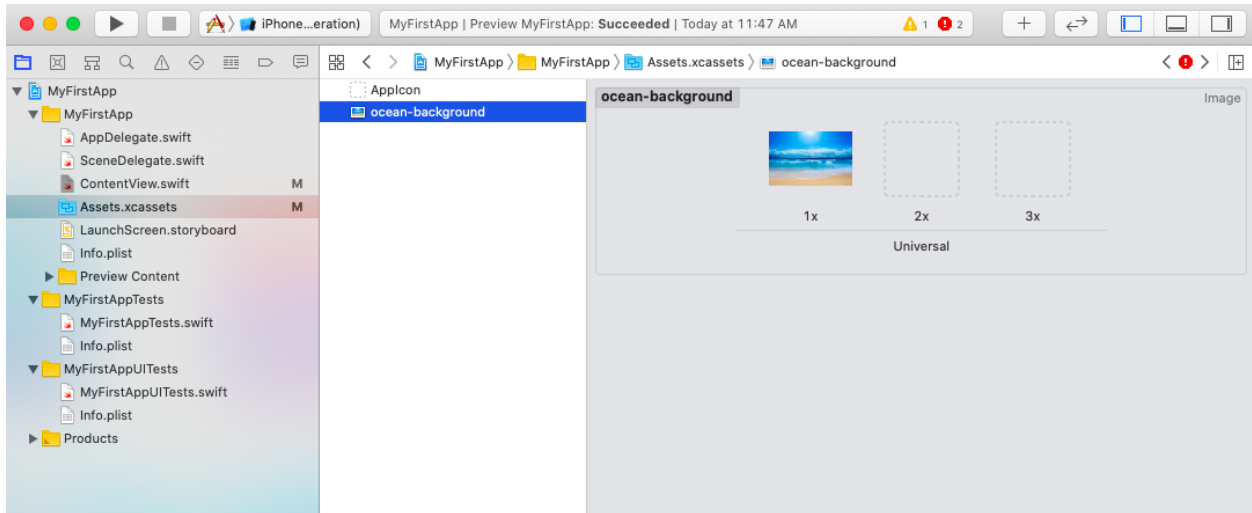

```
struct ContentView: View {  
    var body: some View {  
        Text("Hello SwiftUI!")  
            .padding()  
    }  
}
```

- You can customize the view by adding some styles. In the preview Command-click the text, a popover appears with different attributes which you can customize.

```
struct ContentView: View {  
    var body: some View {  
        Text("Hello SwiftUI!")  
            .padding()  
            .font(.title)  
            .foregroundColor(.green)  
    }  
}
```

Adding images

Go to `Assets.xcassets`. Drag and drop your images.

Then use it simply as

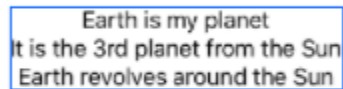

```
Image("ocean-background")
```

2.Combine Views using Stack

- A Stack is a collection of SwiftUI views that are grouped together. There are 3 stacks.
 - VStack, a vertical stack shows views in top-bottom
 - HStack, a horizontal stack shows views in left-right
 - ZStack, a depth based stack shows views in back-front

Examples:

```
VStack {  
    Text("Earth is my planet")  
    Text("It is the 3rd planet from the Sun")  
    Text("Earth revolves around the Sun")  
}
```

Earth is my planet
It is the 3rd planet from the Sun
Earth revolves around the Sun

```
HStack {  
    Text("Earth")  
    Text("It is spherical")  
}
```

Earth It is spherical

```
ZStack {  
    Image("ocean-background")  
        .resizable()  
        .frame(width:300, height:200)  
    Text("A journey of a thousand miles starts with a single  
step")  
        .foregroundColor(Color.red)  
}
```

4.State management in swiftUI
